

Power That Pushes the Boundary

Supercharged Cell Phone Signal Booster for Car, Truck, Van, or SUV

Fusion2Go XR - Extended Range Signal Booster for All Carriers' 5G and 4G LTE Signals in Weak Signal Areas

While traveling through the fringes of cellular network coverage, drivers need a cell phone signal booster with high uplink / transmit power to maintain reliable connectivity. Typically, the reason that calls drop, text messages go unsent, and data streaming buffers or freezes is because the cell phone does not have enough uplink power to send signal to distant cell towers.

Fusion2Go XR has the HIGHEST UPLINK POWER to get the phones' signals back to the tower, keeping users connected further into the cellular void. The Fusion2Go XR intelligent booster system locks onto the cellular carriers' signals and simultaneously improves both transmit and receive signals to substantially improve the functional range of talk, text, and data communications of all mobile devices within the vehicle.

Fusion2Go XR

BROADBAND UPLINK POWER AWGN EIRP (DBM)

	Fusion2Go XR	Closest Competitor
Band 12	26.58	26.3
Band 13	27.28	26.8
Band 5	27.78	26.7
Band 25	27.68	25.91
Band 4	27.3	25.7

The SUPERCHARGED Fusion2Go XR out-performs the nearest competitor in Uplink Power on all cellular bands/carriers (see table on left) which allows the mobile devices inside the vehicle to transmit voice and data signals to the furthest cell towers.

The Fusion2Go XR features UPGRADED COMPONENTS, including high gain mag-mount rooftop antenna and internal patch antenna, and lower-loss coax cable that easily and securely install in minutes to help maximize connectivity to help drivers and passengers stay connected while traveling in challenging signal areas.

By providing stronger connectivity and extended range, Fusion2Go XR users can reliably place and hold calls, send, and receive texts, enjoy faster data speeds and a more consistent streaming experience on all 5G and 4G LTE cellular devices inside the vehicle.

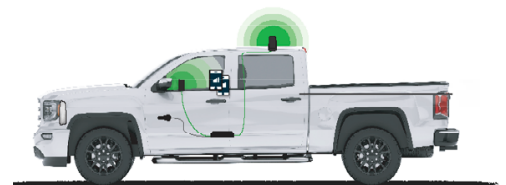

Boost voice, text, 5G / 4G LTE data speeds -- Industry-leading signal boosters improve voice and data throughput inside any vehicle for more reliable talk, text, email and streaming on all mobile phones - including hotspots.

Easy install with mobile app -- Quickly optimize booster performance with antenna position and separation assistance with the 'SureCall' mobile app that is available in the Google Play or Apple's App Store.

American, guaranteed -- The booster system is designed, assembled, and tested in the USA. It includes SureCall's lifetime 100% US-based customer support, industry leading 3-year warranty and is certified by the FCC.
